

## DHISCO cache

As a hotelier or a distributor, your goal is not only to increase bookings but improve transaction speed as well. DHISCO offers a wealth of cache features to enhance shop and book processing. In fact, DHISCO Cache is a passion for us and a product that ensures your data is current and accurate.

When you partner with DHISCO you automatically access our cache features. No new schema development is required and it is fully active the day your data goes live.

### manage your transaction traffic and lower your costs

DHISCO continually develops enhancements to increase speed and improve processing which results in a cleaner, faster cache. DHISCO Cache also offloads transactions from your central reservation system (CRS), further improving efficiencies.

- Allows the CRS to work more efficiently, therefore decreasing response times
- Increases shopping opportunities and reduces response times by moving popular transactions to the cache—without detriment to your CRS
- Delivers less than millisecond response times even with exceptionally high transaction volumes

### unique features

DHISCO's change discovery expiration feature uses a unique process to expire data in the cache.

- Change discovery notifications are sent from your CRS to DHISCO when rates or availability change and DHISCO conveniently expires the corresponding transactions in the cache
- DHISCO Cache automatically and accurately deletes cache records, clearing space for new cache records and efficient processing
- Suppliers are able to configure the stale times for cached transactions based on criteria such as the lead time or number of days until the arrival date

DHISCO Cache offers an exclusive feature: error caching.

- Storing the most common errors for "property not available" and "property not found" reduces processing time and queries to the CRS on transactions that will not result in a booking

The key to a powerful cache is efficiency and accuracy. DHISCO Cache is a priority for us and we continually enhance the system to benefit both hotel and distributor clients. At DHISCO we work to drive your success.
